

CLAIMS

1. A transflective liquid crystal device comprising:

a first transparent substrate;

a second transparent substrate opposed to the first substrate;

5 a liquid crystal held between the first and second substrates;

a light source provided on a side of the first substrate, which is opposite to the liquid crystal side thereof;

a transflective electrode layer arranged on the first substrate opposite to the second substrate;

10 a polarizer provided on a side of the second substrate, which is opposite to a first substrate side thereof;

a first retardation plate arranged between the polarizer and the second substrate; and

a second retardation plate arranged between the polarizer and the
15 first retardation plate;

wherein a twist angle of the liquid crystal is 230 to 260 degrees;

a minimum and maximum Δn (product of optical anisotropy Δn and thickness d) of the liquid crystal are $0.85 \mu\text{m}$ or less and $0.70 \mu\text{m}$ or more, respectively;

20 Δn of the first retardation plate is $150 \pm 50 \text{ nm}$ or $600 \pm 50 \text{ nm}$;

Δn of the second retardation plate is $550 \pm 50 \text{ nm}$;

an angle θ_1 formed by a transmission axis or absorption axis of the polarizer and an optical axis of the second retardation plate is 15 to 35 degrees; and

25 an angle θ_2 formed by an optical axis of the first retardation

plate and the optical axis of the second retardation plate is 60 to 80 degrees.

2. The transflective liquid crystal device according to Claim 1, wherein the thickness of the liquid crystal is 0.70 to 0.85 μm .

5 3. The transflective liquid crystal device according to Claim 1, further comprising a color filter provided on the liquid crystal side of the first or second substrate.

4. The transflective liquid crystal device according to Claim 1, wherein the transflective electrode layer comprises a reflecting layer
10 having a slit formed therein.

5. The transflective liquid crystal device according to Claim 4, wherein the slit has a width of 3 to 20 μm .

6. The transflective liquid crystal device according to Claim 1, wherein the transflective electrode layer has a laminated structure
15 comprising a transflective film, a transparent insulating film arranged on the transflective film, and a transparent electrode arranged on the insulating film.

7. The transflective liquid crystal device according to Claim 1, wherein a passive matrix driving system in a normally black mode is
20 used.

8. The transflective liquid crystal device according to Claim 1, further comprising:

another polarizer arranged between the first substrate and the light source; and

25 another retardation plate arranged between the first substrate and

the polarizer.

9. The transflective liquid crystal device according to Claim 1, wherein unevenness is formed on a surface of the first substrate opposite to the second substrate.

5 10. An electronic apparatus comprising a transflective liquid crystal device according to Claim 1.
